

1. Direct Rule Breaches & Methodological Contradictions

A. Method Text Explicitly Contradicts Corpus Data (overstates-pre-2014)

- **The Rule / Claim (Extract C.1b):** The schema documentation for the provenance layer explicitly states: overstates-pre-2014: UNATTESTED – no record uses this value.
- **The Contradiction:** The corpus's own generated cross-tabulation in Extract A.3 lists overstates-pre-2014: 1 . Provenance record P-122 (*Renewable generation was imputed, not metered, up to FY2013-14*) explicitly carries bias overstates-pre-2014 .
- **Impact:** The method section documentation is stale and directly contradicts the underlying dataset, demonstrating a failure of internal documentation synchronization.

B. Misapplication of too-early to Measures Not in Force

- **The Rule (Extract C.1):** too-early is strictly defined as: *"the measure is in force but has not run long enough for its stated objective to be testable. THE OBSTACLE IS ELAPSED TIME AND THE EVIDENCE TIME ACCUMULATES."*
- **The Violation:**
 - **L-0205 (India-EU agreement):** Scored too-early . The claim text explicitly notes the agreement is *"concluded but not in force"* and that *"no date exists for either [signature or entry into force]"*.
MD +1
 - **L-0188 (US 6 February trade framework):** Scored too-early . The claim text notes the framework contains *"an interim agreement not concluded since"*.
MD +1
- **Impact:** Assigning too-early to measures that are **not in force** breaks the core requirement of Rule C.1. Measures not in force have an obstacle of executive/legislative action, not elapsed time.
MD +1

C. Unvetted Use of not-published Without Stated Searches

- **The Rule (Extract C.5):** *"An absence-of-publication claim requires a stated search... Absent one of those, the honest wording is 'not searched', not 'not published'."* Rule C.4 adds that not-published requires data to exist in a holder's hands but remain unreleased.
MD
- **The Violation:** not-published is assigned 206 times across 226 ledger records. Across Term 3 records alone—such as L-0207, L-0208, L-0209, L-0211, L-0212, L-0213, L-0214, L-0215, L-0216, L-0217, L-0221, L-0222, and L-0224—the summary blocks list not-published as an unmeasured reason without providing the required

proof of an enumerated index, observed archive convention, or exhausted named routes. Extract C.5 itself concedes that `not-published` was mistakenly used for `not-searched` three times in Phase 15.

MD + 2

- **Impact:** The system routinely logs unverified search failures as official administrative non-disclosure (`not-published`), inflating the apparent opacity of the state.

MD

2. Arbitrary Categorization & Selective Verdict Boundary Enforcement

A. Double Standard: Statutory Violations Scored as `failed` vs. Laundering into `no-objective`

- **The Contradiction:**

- In L-0095 (*RTE 10% teacher vacancy ceiling*), L-0106 (*Single-teacher schools*), L-0108 (*WB teacher recruitment panel*), and L-0162 (*GST Council dispute mechanism*), the claim field reads `none stated at announcement` (or quotes raw text). Yet, all four are scored `failed` because the system evaluates them against statutory, constitutional, or judicial benchmarks.
- In contrast, L-0094 (*National teacher-vacancy statistic withdrawn*), L-0122 (*AFSPA Sec 7: 0/50 sanction requests granted*), L-0154 (*Article 281 due consideration*), L-0164 (*Governor bill assent silence*), and L-0167 (*Inter-State Council non-meetings*) also carry `none stated at announcement` and represent clear statutory/constitutional non-compliance. Yet, these were classified as or rescored to `no-objective` on the grounds that no formal executive launch claim was made.

MD + 1

MD + 1

- **Impact:** The framework arbitrarily decides when a statutory or constitutional mandate acts as an evaluation target. This allows severe institutional breakdowns (e.g., 0 out of 50 AFSPA prosecution sanctions granted in L-0122) to be insulated from a `failed` verdict by dumping them into the neutral `no-objective` bucket.

MD + 1

B. Inconsistent Assignment of `awaiting-adjudication` vs. `contested`

- **The Rule (Extract C.1):** `awaiting-adjudication` applies when "the measure is in force and its effect is testable in principle, but the term that would settle the assessment is a pending decision by a body outside the enacting authority."

MD

- **The Violation:** The value was added on 2026-08-03 and assigned to L-0086, L-0127, L-0134, and L-0143. However, multiple records matching this exact criterion were left in `contested`:

MD

- **L-0075** (*PMLA procedural architecture*): In force, testable, pending final constitutional reference before the Supreme Court.
MD
- **L-0082** (*Sedition abeyance / BNS Sec 152*): In force, pending judicial review before the Supreme Court.
MD
- **L-0163** (*Tamil Nadu bills assented by SC*): Unsettled by a pending Constitution Bench reference.
MD
- **L-0165** (*Delhi governance law*): In force, pending before a 5-judge Constitution Bench.
MD
- **L-0168** (*West Bengal MGNREGA fund stoppage*): Restored by court order; litigation pending.
MD
- **Impact:** Identical legal/constitutional review states are split arbitrarily between awaiting-adjudication and contested .
MD

3. Sourcing Tier Inversion & Structural Domain Bias

A. Sourcing Inversion on Success Claims (worked)

- **The Pattern:** Across 226 ledger records, only 9 receive a worked verdict (4.0%). worked records carry the lowest mean citations per record in the entire corpus (1.4 citations/record).
MD + 1
- **The Evidence:** 8 of the 9 worked records rely almost exclusively on 1 or 2 official T1 government press releases:
 - **L-0023** (*Asset Quality Review*): 1 source [T1×1]
MD
 - **L-0026** (*PSB Recapitalisation*): 1 source [T1×1]
MD
 - **L-0029** (*Digital Public Infrastructure*): 1 source [T1×1]
MD
 - **L-0047** (*Railway Electrification*): 1 source [T1×1]
MD
 - **L-0052** (*Renewable Energy Expansion*): 1 source [T1×1]
MD
 - **L-0053** (*Port Efficiency*): 1 source [T1×1]
MD
 - **L-0207** (*Punatsangchhu-II Hydropower*): 2 sources [T1×2]
MD
 - **L-0014** (*Flexible Inflation Targeting*): 1 source [T4×1]
MD

- **Methodological Vulnerability:** Awarding an unqualified `worked` verdict based on a single T1 government press release (e.g., L-0023, L-0026, L-0052, L-0053) accepts government self-reporting as ground truth. Furthermore, L-0207 is marked `worked` despite explicitly logging `unmeasured: 2 [not-published×2]` because tariff figures and commercial terms were kept secret. In contrast, missing pricing or minor delivery discrepancies in L-0200 (*Emergency Procurement*) or L-0203 (*Rafale 2016*) instantly demote those records to `partly` or `contested`.

MD + 2

B. Domain Distortion & Structural Asymmetry

- **The Pattern:** Hard physical infrastructure receives a disproportionate share of positive/delivery scores, while governance, civil liberties, and regional policy are insulated from evaluation.

MD

- **The Evidence (Extract A.3 Domain Cross-Tabulation):**

- `infrastructure` (24 records): 4 `worked`, 9 `partly` (54.1% positive delivery).

MD

- `welfare` (21 records): 1 `worked`, 8 `partly` (42.8% positive delivery).

MD

- `kashmir` (46 records): 0 `worked`, 0 `failed`, 18 `contested`, 17 `no-objective` (76.1% non-evaluative).

MD

- `governance` (113 records): 1 `worked`, 6 `partly`, 44 `contested`, 40 `no-objective` (74.3% non-evaluative).

MD

- **Methodological Vulnerability:** The instrument evaluates physical infrastructure against narrow physical targets (e.g., kilometers of track, installed megawatts), making `worked` or `partly` achievable. Conversely, institutional governance, human rights, and civil liberties records are systematically funneled into `no-objective` or `contested` by framing structural administrative failures as "states of measurement" rather than policy performance failures.

MD + 1

What I could not check from this file alone

1. **The 269 Time Series Records & Point-Level Data:** Extract A contains ledger and provenance metadata but omits the 269 underlying series records. I could not verify whether the raw data points contain undeclared basis breaks, improper splices across Finance Commission award boundaries (violating P-103), or unflagged imputed values.
2. **The 60 Paired Comparison Records:** The full prose, alignment rules, and mathematical derivations of the 60 `parts/pairs` records are absent. I could not check whether derived ratios propagate input uncertainties or violate Rule C.6c.

MD + 1

3. **Full Assessment Notes for 191 Ledger Records:** Extract A provides only the first substantive sentence of the assessment note for most records. I could not evaluate whether the full prose notes for records outside Extract B contain unstated assumptions, logical leaps, or unacknowledged contradictions.
MD +1
4. **The Rendered Frontend & Visual Layouts:** Because I am reviewing raw data rather than the built HTML output, I could not verify whether fields like `assessmentNote`, `revisitTrigger`, or `caveat` actually render visibly without truncation across all domain and summary pages.
MD +1
5. **Search Path Logs for `not-published` Claims:** I could not check the repository's path-probing logs to verify whether the 206 `not-published` claims represent genuinely exhausted search routes or unexecuted guesses that should be classified as `not-searched` under Rule C.5.
MD
6. **The 699 KB Append-Only Verification Log:** Historical rationale and commit diffs recorded in `docs/verification-log.md` were not provided, preventing verification of the specific analytical triggers behind historical record rescores.
MD
